

Group 10 MELOICS

A music producing platform that allows artists to share their work and collaborate with friends.

Final Prototypes

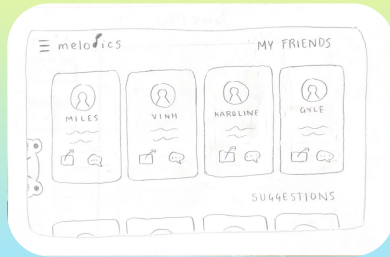

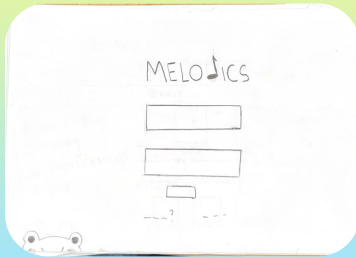

Introduction

We had two main goals in mind: (a) we wanted to **lower barriers to entry for music producers**, and (b) we sought to **reduce frustration** with the music-making process.

Research

We had five anonymous music producers fill out a survey, and we decided to focus more on the **interpersonal** and **interactive** parts of music making.

Paper Prototyping

Questions & Findings

*How might we create a product that promotes **learning music production** while also encouraging **collaboration**?*

Melodics allows users to not only publish tracks in-progress, but also publish them as a collection of individual audio tracks. From there, users can give feedback and even add others as friends to talk through direct messages and communicate further.
